

Haier SERVICE MANUAL

Packaged Type
DC Inverter

Model No.1U71REAFRA
1U24REAFRA

WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or Repair the product or products dealt with in this service information by anyone else could result in serious injury or death

1 Introduction

1.1 Model name explanation

1.2 Safety Cautions

Be sure to read the following safety cautions before conducting repair work.

The caution items are classified into “Warning” and “Caution”. The “Warning” items are especially important since they can lead to death or serious injury if they are not followed closely. The “Caution” items can also lead

to serious accidents under some conditions if they are not followed. Therefore, be sure to observe all the safety

caution items described below.

About the pictograms

△ This symbol indicates an item for which caution must be exercised.

The pictogram shows the item to which attention must be paid.

○ This symbol indicates a prohibited action.

The prohibited item or action is shown inside or near the symbol.

● This symbol indicates an action that must be taken, or an instruction.

The instruction is shown inside or near the symbol.

After the repair work is complete, be sure to conduct a test operation to ensure that the equipment operates

Normally, and explain the cautions for operating the product to the customer.

1.2.1 Caution in Repair

| Warning | |
|---|---|
| Be sure to disconnect the power cable plug from the plug socket before disassembling the equipment for a repair. Working on the equipment that is connected to a power supply can cause an electrical shock. If it is necessary to supply power to the equipment to conduct the repair or inspecting the circuits, do not touch any electrically charged sections of the equipment. |  |
| If the refrigerant gas discharges during the repair work, do not touch the discharging refrigerant gas. The refrigerant gas can cause frostbite. |  |
| When disconnecting the suction or discharge pipe of the compressor at the welded section, release the refrigerant gas completely at a well-ventilated place first. If there is a gas remaining inside the compressor, the refrigerant gas or cooling machine oil discharges when the pipe is disconnected, and it can cause injury. | |
| If the refrigerant gas leaks during the repair work, ventilate the area. The refrigerant gas can generate toxic gases when it contacts flames. |  |
| The step-up capacitor supplies high-voltage electricity to the electrical components of the outdoor unit. Be sure to discharge the capacitor completely before conducting repair work. A charged capacitor can cause an electrical shock. |  |
| Do not start or stop the air conditioner operation by plugging or unplugging the power cable plug. Plugging or unplugging the power cable plug to operate the equipment can cause an electrical shock or fire. |  |

| Warning | |
|--|--|
| Do not repair the electrical components with wet hands . Working on the equipment with wet hands can cause an electrical shock |  |
| Do not clean the air conditioner by splashing water. Washing the unit with water can cause an electrical shock. |  |
| Be sure to provide the grounding when repairing the equipment in a humid or wet place, to avoid electrical shock. |  |
| Be sure to turn off the power switch and unplug the power cable when cleaning the equipment. The internal fan rotates at a high speed, and cause injury. |  |
| Do not tilt the unit when removing it. The water inside the unit can spill and wet the furniture and floor. |  |
| Be sure to check that the cooling cycle section has cooled down sufficiently before conducting repair work. Working on the unit when the cooling cycle section is hot can cause burns. | |
| Use the welder in a well-ventilated place. Using the welder in an enclosed room can cause oxygen deficiency. |  |

1.2.2 Cautions Regarding Products after Repair

| Warning | |
|--|-------------------------|
| Be sure to use parts listed in the service parts list of the applicable model and appropriate tools to conduct repair work. Never attempt to modify the equipment. The use of inappropriate parts or tools can cause an electrical shock, excessive heat generation or fire. | |
| When relocating the equipment, make sure that the new installation site has sufficient strength to withstand the weight of the equipment. If the installation site does not have sufficient strength and if the installation work is not conducted securely, the equipment can fall and cause injury. | |
| Be sure to install the product correctly by using the provided standard installation frame. Incorrect use of the installation frame and improper installation can cause the equipment to fall, resulting in injury. | For integral units only |
| Be sure to install the product securely in the installation frame mounted on a window frame. If the unit is not securely mounted, it can fall and cause injury. | For integral units only |

| Warning | |
|---|---|
| <p>Be sure to use an exclusive power circuit for the equipment, and follow the technical standards related to the electrical equipment, the internal wiring regulations and the instruction manual for installation when conducting electrical work.</p> <p>Insufficient power circuit capacity and improper electrical work can cause an electrical shock or fire.</p> | |
| <p>Be sure to use the specified cable to connect between the indoor and outdoor units. Make the connections securely and route the cable properly so that there is no force pulling the cable at the connection terminals.</p> <p>Improper connections can cause excessive heat generation or fire.</p> | |
| <p>When connecting the cable between the indoor and outdoor units, make sure that the terminal cover does not lift off or dismount because of the cable.</p> <p>If the cover is not mounted properly, the terminal connection section can cause an electrical shock, excessive heat generation or fire.</p> | |
| <p>Do not damage or modify the power cable.</p> <p>Damaged or modified power cable can cause an electrical shock or fire. Placing heavy items on the power cable, and heating or pulling the power cable can damage the cable.</p> |  |
| <p>Do not mix air or gas other than the specified refrigerant (R-410A / R22) in the refrigerant system.</p> <p>If air enters the cooling system, an excessively high pressure results, causing equipment damage and injury.</p> | |
| <p>If the refrigerant gas leaks, be sure to locate the leak and repair it before charging the refrigerant. After charging refrigerant, make sure that there is no refrigerant leak.</p> <p>If the leak cannot be located and the repair work must be stopped, be sure to perform pump-down and close the service valve, to prevent the refrigerant gas from leaking into the room. The refrigerant gas itself is harmless, but it can generate toxic gases when it contacts flames, such as fan and other heaters, stoves and ranges.</p> |  |
| <p>When replacing the coin battery in the remote controller, be sure to disposed of the old battery to prevent children from swallowing it.</p> <p>If a child swallows the coin battery, see a doctor immediately.</p> | |

| Caution | |
|---|--|
| <p>Installation of a leakage breaker is necessary in some cases depending on the conditions of the installation site, to prevent electrical shocks.</p> | |

| | |
|---|---|
| Do not install the equipment in a place where there is a possibility of combustible gas leaks. If a combustible gas leaks and remains around the unit, it can cause a fire. |  |
| Be sure to install the packing and seal on the installation frame properly. If the packing and seal are not installed properly, water can enter the room and wet the furniture and floor. | |

1.2.3 Inspection after Repair

| | |
|--|---|
| Warning | |
| Check to make sure that the power cable plug is not dirty or loose, then insert the plug into a power outlet all the way. If the plug has dust or loose connection, it can cause an electrical shock or fire. |  |
| If the power cable and lead wires have scratches or deteriorated, be sure to replace them. Damaged cable and wires can cause an electrical shock, excessive heat generation or fire. |  |

| | |
|--|---|
| Warning | |
| Do not use a joined power cable or extension cable, or share the same power outlet with other electrical appliances since it can cause an electrical shock, excessive heat generation or fire. |  |

| | |
|---|--|
| Caution | |
| Check to see if the parts and wires are mounted and connected properly, and if the connections at the soldered or crimped terminals are secure. Improper installation and connections can cause excessive heat generation, fire or an electrical shock. | |
| If the installation platform or frame has corroded, replace it. Corroded installation platform or frame can cause the unit to fall, resulting in injury. | |

| | |
|--|---|
| Check the grounding, and repair it if the equipment is not properly grounded. Improper grounding can cause an electrical shock. |  |
| Be sure to measure the insulation resistance after the repair, and make sure that the resistance is 1 M ohm or higher. Faulty insulation can cause an electrical shock. | |
| Be sure to check the drainage of the indoor unit after the repair. Faulty drainage can cause the water to enter the room and wet the furniture and floor. | |

1.2.4 Using Icons

Icons are used to attract the attention of the reader to specific information. The meaning of each icon is described in the table below:

1.2.5 Using Icons List

| Icon | Type of Information | Description |
|---|---------------------|--|
|  Note | Note | A “note” provides information that is not indispensable, but may nevertheless be valuable to the reader, such as tips and tricks. |
|  Caution | Caution | A “caution” is used when there is danger that the reader, through incorrect manipulation, may damage equipment, lose data, get an unexpected result or has to restart (part of) a procedure. |
|  Warning | Warning | A “warning” is used when there is danger of personal injury. |
|  Reference | Reference | A “reference” guides the reader to other places in this binder or in this manual, where he/she will find additional information on a specific topic. |

Notes:

The graphs are based on the following condition:

| | |
|--------------------------|------|
| Equivalent piping length | 5m |
| Level difference | 0m |
| Air flow rate | high |

6.PCB Diagram

Connectors

PCB (1) (Outdoor Control PCB)

- 1) CN1, CN2 Connectors for power N and L
- 2) CN3 Connector for ground
- 3) CN22,CN23 Connectors to the module board CN10,CN11
- 4) CN9, CN8 Connectors for CN1,CN2 on the module board
- 5) CN10 Connector for four way valve coil
- 6) CN18,CN20 Connectors for thermistors
- 7) CN26, CN24 Connectors to P and N of the module board
- 8) CN4 Connector for communicate between indoor and outdoor unit
- 9) CN16 Connector for electric expansion valves
- 10) CN21 Connector for DC FAN

Other Designations

- 1) FUSE 1, (20/25A, 250VAC)
- 2) LED 1 Keep light representative normal, if keep flash interval representative trouble Alarm
- 3) RV4, RV2, RV3 Varistor

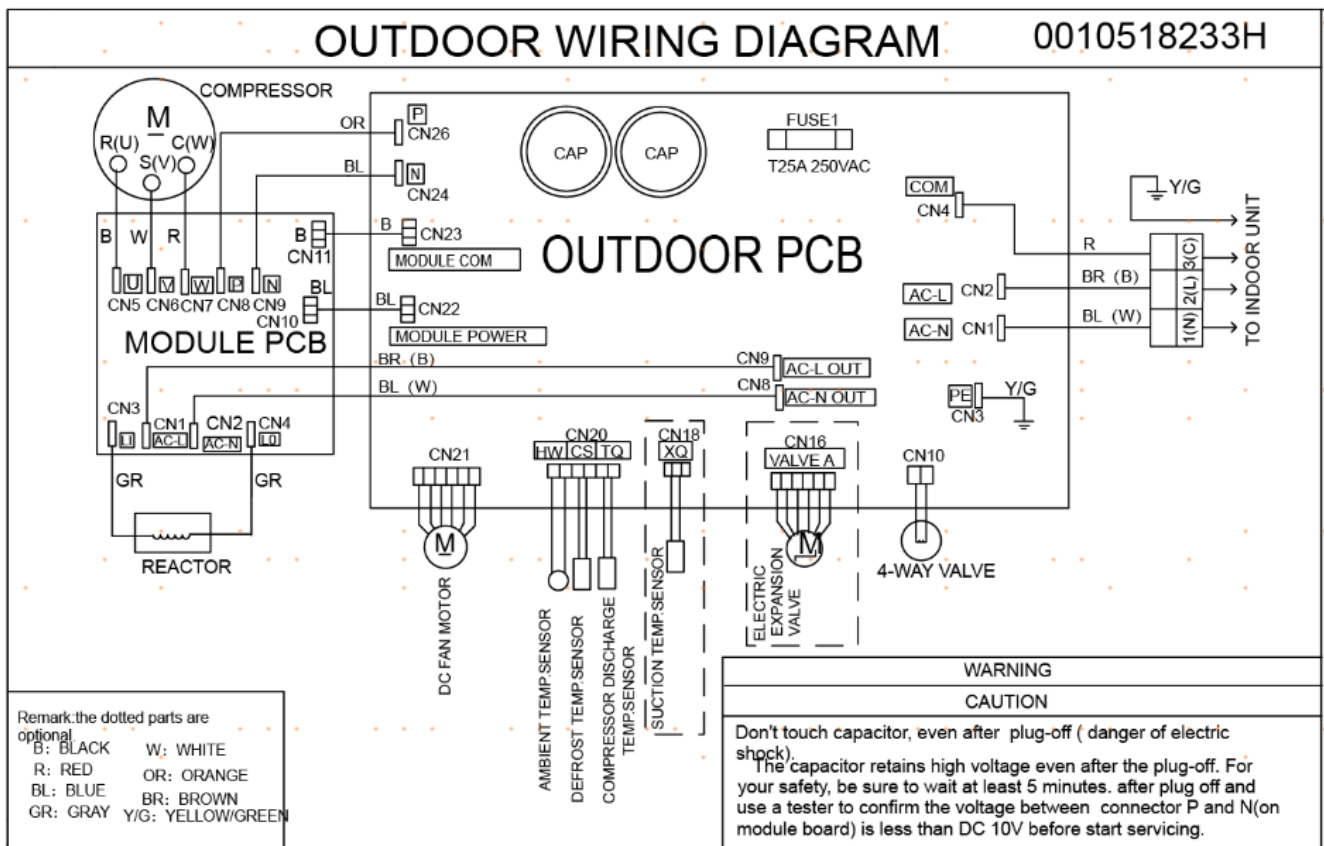

PCB (2) (Module PCB)

CN10 Connector for the DC power 5V and 15V form the control PCB
CN11 Connector for communicate between the control board and the module board
P (CN8), N (CN9) Connector for capacitance board
LI (CN3), LO (CN4) Connector for reactor
CN5, CN6, CN7Connector for the U, V, W wire of the compressor

PCB (2)

Wiring diagrams

7. Functions and Control

7.1 Main functions and control specification

7.1.1 The operation frequency of outdoor unit and its control

7.1.1.1 The operation frequency control of compressor

The operation frequency scope of compressor:

| Mode | Minimun operation frequency | Maximun operation frequency |
|---------------|-----------------------------|-----------------------------|
| Heating | 17Hz | 118Hz |
| Refrigeration | 17Hz | 90Hz |

7.1.1.2 The starting of compressor

When the compressor is started for the first time, it must be kept under the conditions of 58Hz,88Hz for one minute (the overheating protection of the outdoor unit air-blowing temperature, immediately decrease the frequency when the compressor is overflowing and releasing the pressure), then it can be operated towards the target frequency. When the machine runs normally, there's no such process. After starting the compressor for operation, the compressor should run according to the calculated frequency, and every determined frequency for protection should be prior to the calculated frequency.

7.1.1.3 The speeds of increasing or decreasing the frequency of the compressor

The speed of increasing or decreasing the frequency rapidly 1 -----1HZ/second

The speed of increasing or decreasing the frequency slowly 2 -----1HZ/10seconds

7.1.1.4 The calculation of the compressor's frequency

1)、The minimum/maximum frequency limitation

A. While refrigerating: $F - MAX - r$ is the maximum operation frequency of the compressor; $F - MIN - r$ is the minimum operation frequency of the compressor.

B. While heating: $F - MAX - d$ is the maximum operation frequency of the compressor; $F - MIN - d$ is the minimum operation frequency of the compressor.

1)、The frequency limitation which is affected by the environment temperature.

Heating mode:

| Serial No. | Temperature scope | Frequency limitation |
|------------|-------------------|----------------------|
| 1 | Wh_c<-12 | Max_hz8 117 HZ |
| 2 | Wh_c<-8 | Max_hz7 117 HZ |
| 3 | Wh_c<-2 | Max_hz4 117 HZ |
| 4 | Wh_c<5 | Max_hz5 99 HZ |
| 5 | Wh_c<10 | Max_hz1 90 HZ |
| 6 | Wh_c<17 | Max_hz2 72 HZ |
| 7 | Wh_c<20 | Max_hz2 62 HZ |
| 8 | Wh_c≥20 | Max_hz6 45 HZ |

Remarks: the above are the maximum frequency limitations of the complete appliance which are affected by the environment, and they have nothing to do with the ability of the indoor unit.

Refrigeration/dehumidification mode::

| Serial No. | Temperature scope | Frequency limitation |
|------------|-------------------|----------------------|
| 1 | Wh_c<16 | Max_hz1 38 HZ |
| 1 | Wh_c<22 | Max_hz1 44 HZ |
| 1 | Wh_c<28 | Max_hz1 55 HZ |

| | | |
|---|---------|---------------|
| 2 | Wh_c<32 | Max_hz2 74 HZ |
| 3 | Wh_c≥40 | Max_hz3 90 HZ |
| 4 | Wh_c<48 | Max_hz4 68 HZ |
| 5 | Wh_c≥48 | Max_hz5 60 HZ |

Remarks: the above are not only the maximum frequency limitations of the complete appliance which are affected by the environment, but also the maximum ability limitation of the system. When the starting ability is not the maximum, its maximum frequency limitation is calculated by the following equations:

The frequency limitation which is affected by the temperature and under the condition of actual ability=the actual running system ability*the maximum frequency which is limited by the temperature and under the condition of maximum ability/the maximum designing ability of the system

$\Delta T = \sum (\Delta T_i \cdot P_i) / \sum P_i$ ($\Delta T_i = |T_{st_i} - T_{nh_i}$ the indoor environment temperature; $P_i = i$ the ability of the indoor unit)

Refrigeration/dehumidification:

| ΔT | <1 | =1 | =2 | =3 | ≥4 |
|---|-----|-----|-----|-----|------|
| The percentage of the rated frequency P | 70% | 80% | 85% | 90% | 100% |

Heating mode:

| ΔT | <1 | =1 | =2 | =3 | ≥4 |
|---|-----|-----|-----|-----|------|
| The percentage of the rated frequency P | 70% | 80% | 85% | 90% | 100% |

$K = \sum K_i$ / the number of running machines

| The indoor set airflow speed | Low | Medium | High | Strong | Quiet | Healthy airflow |
|---|-----|--------|------|--------|-------|-----------------|
| The percentage of the rated frequency K_i | 80% | 90% | 100% | 110% | 70% | 65% |

The calculation of the actual output frequency: when there is no healthy airflow: $F = F_{ED} \cdot P \cdot K$

When the healthy airflow has been set: $F = F_{ED} \cdot P \cdot K$ (airflow speed) $\times K$ (healthy airflow)

When refrigerating, it is needed to satisfy $F_{MIN} - d < F < F_{MAX} - d$

When heating, it is needed to satisfy $F_{MIN} - r < F < F_{MAX} - r$

7.1.2: The outdoor fan control (exchange fan)

When the fan is changed among every airflow speed (including stop blowing), in order to avoid the airflow speed from skipping frequently, it must be kept under each mode for over 30 seconds, and then it can be changed to another mode (when refrigerating, the time is changed to 15 seconds).

7.1.2.1: The outdoor fan control when refrigerating or dehumidifying

During the compressor is started for 3 seconds, the outdoor fan is controlled the airflow speed according to the temperature conditions of the outdoor environment.

| | | | |
|----------|-----------|------------------|-----------|
| Tao (°C) | Tao <22°C | 22°C ≤ Tao <29°C | Tao ≥29°C |
| Cool/Dry | Level 3 | Level 5 | Level 7 |
| Tao (°C) | Tao <10°C | 10°C ≤ Tao <16°C | Tao ≥16°C |
| Heat | Level 7 | Level 5 | Level 3 |

After the compressor is started for 3 seconds, the outdoor fan is controlled the airflow speed according to the temperature conditions of the outdoor environment and frequency of compressor.

| Frequency of cooling mode (Hz) | | <51 | 51~70 | ≥70 |
|--------------------------------|-------|---------|---------|---------|
| Tao (°C) | ≤22 | Level 3 | Level 5 | Level 6 |
| | 22~29 | Level 4 | Level 6 | Level 7 |
| | ≥29 | Level 7 | | |

| Frequency of heat mode (Hz) | | <51 | 51~90 | ≥90 |
|-----------------------------|-------|---------|---------|---------|
| Tao (°C) | ≤10 | Level 5 | Level 7 | Level 7 |
| | 10~16 | Level 4 | Level 5 | Level 5 |
| | >16 | Level 2 | | |

7.1.3: The control of the outdoor electronic expansion valve

When starting the compressor: the opening size of the valve must be guaranteed to have entered into the standard opening size, and then the compressor can be started.

When refrigeration is in vain (the machine is shut down or is in the state of retrograde operation), the opening size of the expansion valve of the indoor unit is 5 steps;

When heating is in vain, the opening size of the expansion valve of the indoor unit is 55 steps;

When the outdoor unit is shut down, the valve is opened completely for 2 minutes, and then begin initialization.

The scope of refrigeration valve 90----480 steps

The scope of heating valve 60----480 steps

The valves are adjusted according to the degree of superheat —SHa, △SHa.

7.1.4: Four way control

For the details of defrosting four-way valve control, see the defrosting process.

Four way working in other ways:

Under the mode of heating, open the four-way valve, when the compressor is not started or changed to non-heating mode, make sure the compressor is stoped for 2 minutes, and then close the four-way valve.

7.1.5 : Protection function

7.1.5.1: TTC high temperature-preventing protection

Once the machine is started, it can run TTC overheating protection of air-blowing, but air-blowing sensor malfunction must alarm after 4 minutes during which the compressor is started (during the course of self-detection, there's no such limitation)

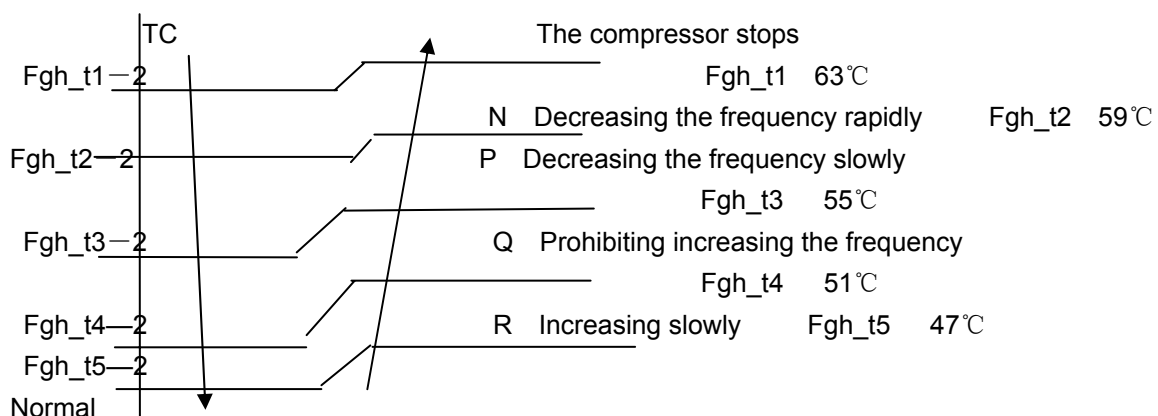

Sensor detection methods: 100 times (one cycle of procedure run is one time, and about 5ms, detection method for each time: continuously sampling for 8 times, then order them and take the mean value of the middle 2 values), take the mean value.

TTC $\geq 115^{\circ}\text{C}$ lasts for 20 seconds. Overheating protection of air-blowing, alarm malfunction to the indoor, others don't last.

7.1.5.2: TC high temperature-preventing control of the indoor heating unit

Tpg_indoor is the highest value of the effective indoor unit (start it and it is in accord with the running state). The indoor heat exchanger sensor tests the temperature of the indoor heat exchanger. If the temperature is higher than 48°C , decrease the rotate speed of the compressor and do the high temperature-preventing protection of the indoor heat exchanger; if the temperature of the indoor heat exchanger is lower than 45°C , recover to the normal control.

- N: Decreasing at the speed of 1HZ/1second
- P: Decreasing at the speed of 1Hz/10seconds
- Q: Continue to keep the last-time instruction cycle
- R: Increasing at the speed of 1Hz/10seconds

Remarks: the outdoor unit

7.1.5.3: The protection function of AC current:

During the starting process of the compressor, if the AC current is greater than 12A, the frequency of the compressor decreases at the speed of 1HZ/second.

During the starting process of the compressor, if the AC current is greater than 11A, the frequency of the compressor decreases at the speed of 0.1HZ/second.

During the starting process of the compressor, if the AC current is greater than 10A, the frequency of the compressor increases at the prohibited speed.

During the starting process of the compressor, if the AC current is greater than 9A, the frequency of the compressor increases at the speed of no faster than 0.1HZ/second.

Remarks: when the outdoor temperature is high, there's compensation for AC current protection.

(1)When the outdoor environment temperature is higher than 40℃, AC current protection value decreases by 1.5A

(2)When the outdoor environment temperature is higher than 50℃,AC current protection value decreases by 3.5A

7.1.5.4: Antifreezing protection of the indoor heat exchanger

When refrigerating/heating, prevent freezing.

Tpg_indoor is the minimum value of the effective indoor unit (start it and it is in accord with the running state).

When $Tpg_indoor < ice_temp_1^{\circ}C$, the frequency of the compressor decreases at the speed of 1HZ/1second.

When $Tpg_indoor < ice_temp_2^{\circ}C$, the frequency of the compressor decreases at the speed of 1HZ/10seconds.

Functions and control

When Tpg_indoor begins to rise again, and $ice_temp_2 \leq Tpg_indoor \leq ice_temp_3^{\circ}C$, the frequency of the compressor doesn't change.

When $ice_temp_3 < Tpg_indoor < ice_temp_4^{\circ}C$, the frequency of the compressor increases at the speed of 1HZ/10seconds.

For example, $Tpg_indoor \leq 0^{\circ}C$, last for 2 minutes, and then the outdoor unit will stop, and report underload malfunction, but don't send malfunction report to the indoor.

The compressor stops for more than 3 minutes, $Tpg_indoor > ice_temp_4^{\circ}C$, the compressor recovers.

7.1.5.5: Temperature protection of the outdoor refrigerating coil

When the defrosting temperature and the sensor's temperature are higher than 68℃, the frequency of the compressor decreases 1hz/10seconds. Keep the frequency until it decreases to the lowest frequency. When the temperatures are lower than 68℃ and higher than 61℃, keep the frequency of the compressor. When the temperatures are lower than 61℃, relieve the defrosting temperature protection.

7.2 Value of Thermistor

7.2.1 Outdoor Unit

Ambient Sensor, Defrosting Sensor, Pipe sensor

R25°C=10K Ω \pm 3% B25°C/50°C=3700K \pm 3%

10. Service Diagnosis

10.1.1 Caution for Diagnosis

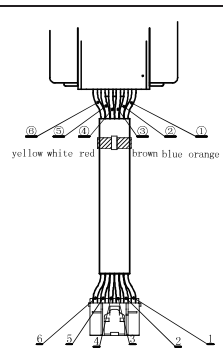

The operation lamp flashes when any of the following errors is detected.

1. When a protection device of the indoor or outdoor unit is activated or when the thermistor malfunctions, disabling equipment operation.
2. When a signal transmission error occurs between the indoor and outdoor units. In either case, conduct the diagnostic procedure described in the following pages.

10.1.2 Problem Symptoms and Measures

| Symptom | Check Item | Details of Measure |
|---|---|---|
| None of the units operates | Check the power supply. | Check to make sure that the rated voltage is supplied. |
| | Check the indoor PCB | Check to make sure that the indoor PCB is broken |
| Operation sometimes stops. | Check the power supply. | A power failure of 2 to 10 cycles can stop air conditioner operation. |
| Equipment operates but does not cool, or does not heat (only for heat pump) | Check for faulty operation of the electronic expansion valve. | Set the units to cooling operation, and compare the temperatures of the liquid side connection pipes of the connection section among rooms to check the opening and closing operation of the electronic expansion valves of the individual units. |
| | Diagnosis by service port pressure and operating current. | Check for insufficient gas. |
| Large operating noise and vibrations | Check the installation condition. | Check to make sure that the required spaces for installation (specified in the Technical Guide, etc.) are provided. |

10.2 Parameter of primary electronic appliance

| NO | Name | Parameter | Picture |
|----|--------------------------|--|--|
| 1 | ELECTRIC EXPANSION VALVE | Rated voltage: 12V Valve orifice : $\Phi 1.8\text{mm}$ Coil resistance $46 \pm 3.7 \Omega$ |  <p>The diagram shows a vertical electric expansion valve. At the top, there are two main ports. Below them, there are four terminals labeled ①, ②, ③, and ④. Terminal ① is yellow, ② is white, ③ is red, and ④ is brown. At the bottom, there are four terminals labeled ⑤, ⑥, ⑦, and ⑧. Terminal ⑤ is red, ⑥ is brown, ⑦ is blue, and ⑧ is orange. The bottom-most terminal is yellow and white.</p> |

10.3 Error Codes and Description indoor display

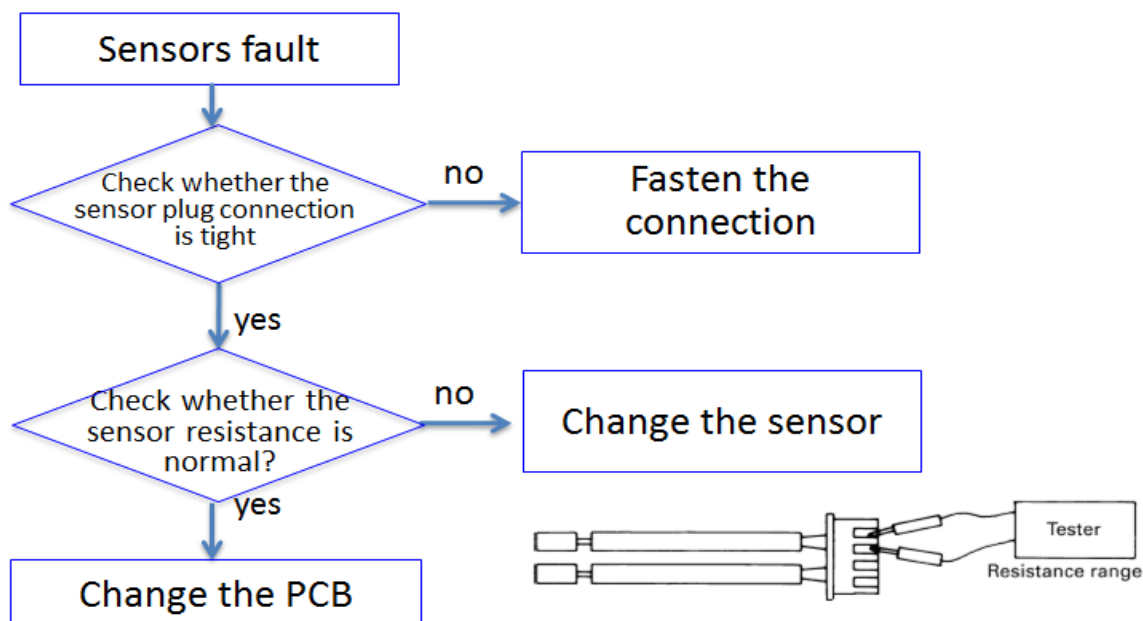

| | Code indication | | fault description |
|---------------------|-----------------|----------------------------|--|
| | Display Code | Outdoor (LED1 flash times) | |
| Indoor and Outdoor | E7 | 15 | Communication fault between indoor and outdoor units |
| Indoor Malfunction | E1 | -- | Room temperature sensor failure |
| | E2 | -- | Heat-exchange sensor failure |
| | E4 | -- | Indoor EEPROM error |
| | E14 | -- | Indoor fan motor malfunction |
| Outdoor Malfunction | F12 | 1 | Outdoor EEPROM error |
| | F1 | 2 | The protection of IPM |
| | F22 | 3 | Overcurrent protection of AC electricity for the outdoor model |
| | F3 | 4 | Communication fault between the IPM and outdoor PCB |
| | F20 | 5 | Compressor overload |
| | F19 | 6 | Power voltage is too high or low |
| | F27 | 7 | Compressor blocked |
| | F4 | 8 | Overheat protection for Discharge temperature |
| | F8 | 9 | Outdoor DC fan motor fault |
| | F21 | 10 | Defrost temperature sensor failure |
| | F7 | 11 | Suction temperature sensor failure |
| | F6 | 12 | Ambient temperature sensor failure |
| | F25 | 13 | Discharge temperature sensor failure |
| | F30 | 14 | Suction temp of compressor is too high |
| | F13 | 16 | Less gas charge |
| | F14 | 17 | 4-way-valve fault |
| | F11 | 18 | deviate from the normal for the compressor |
| | F28 | 19 | Loop of the station detect error |
| | F2 | 24 | Overcurrent of the compressor |
| | F23 | 25 | Overcurrent protection for single-phase of the compressor |

10.3.1 Thermistor or Related Abnormality

Indoor display E1: Room temperature sensor failure
 E2: Indoor pipe sensor failure

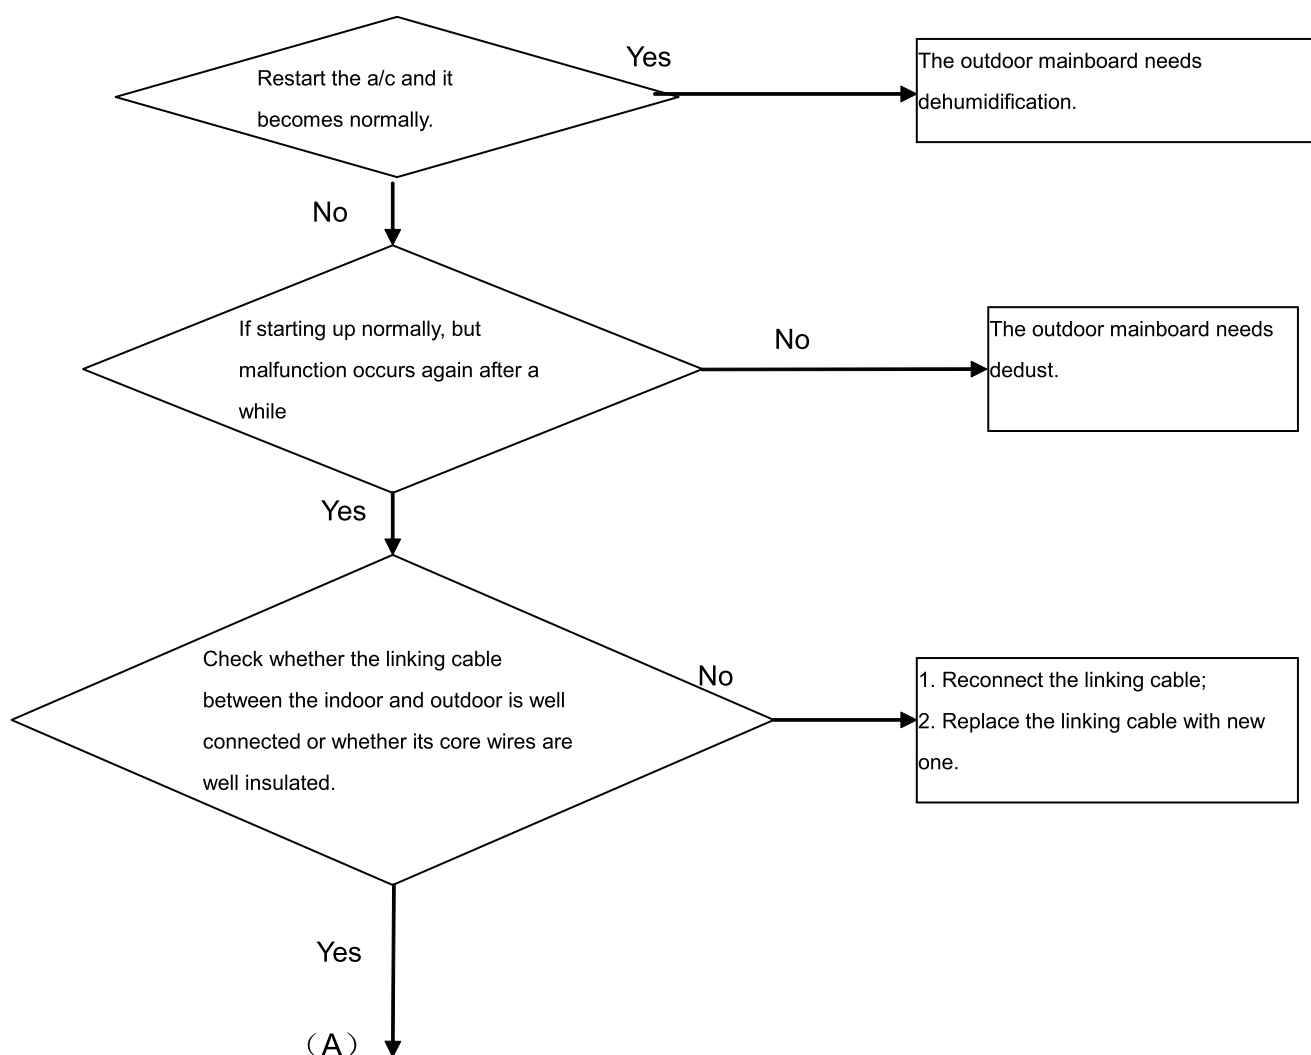

outdoor display LED1 flash 10 times: Defrost temperature sensor failure
 LED1 flash 11 times: Suction temperature sensor failure
 LED1 flash 12 times: Ambient temperature sensor failure
 LED1 flash 13 times: Discharge temperature sensor failure

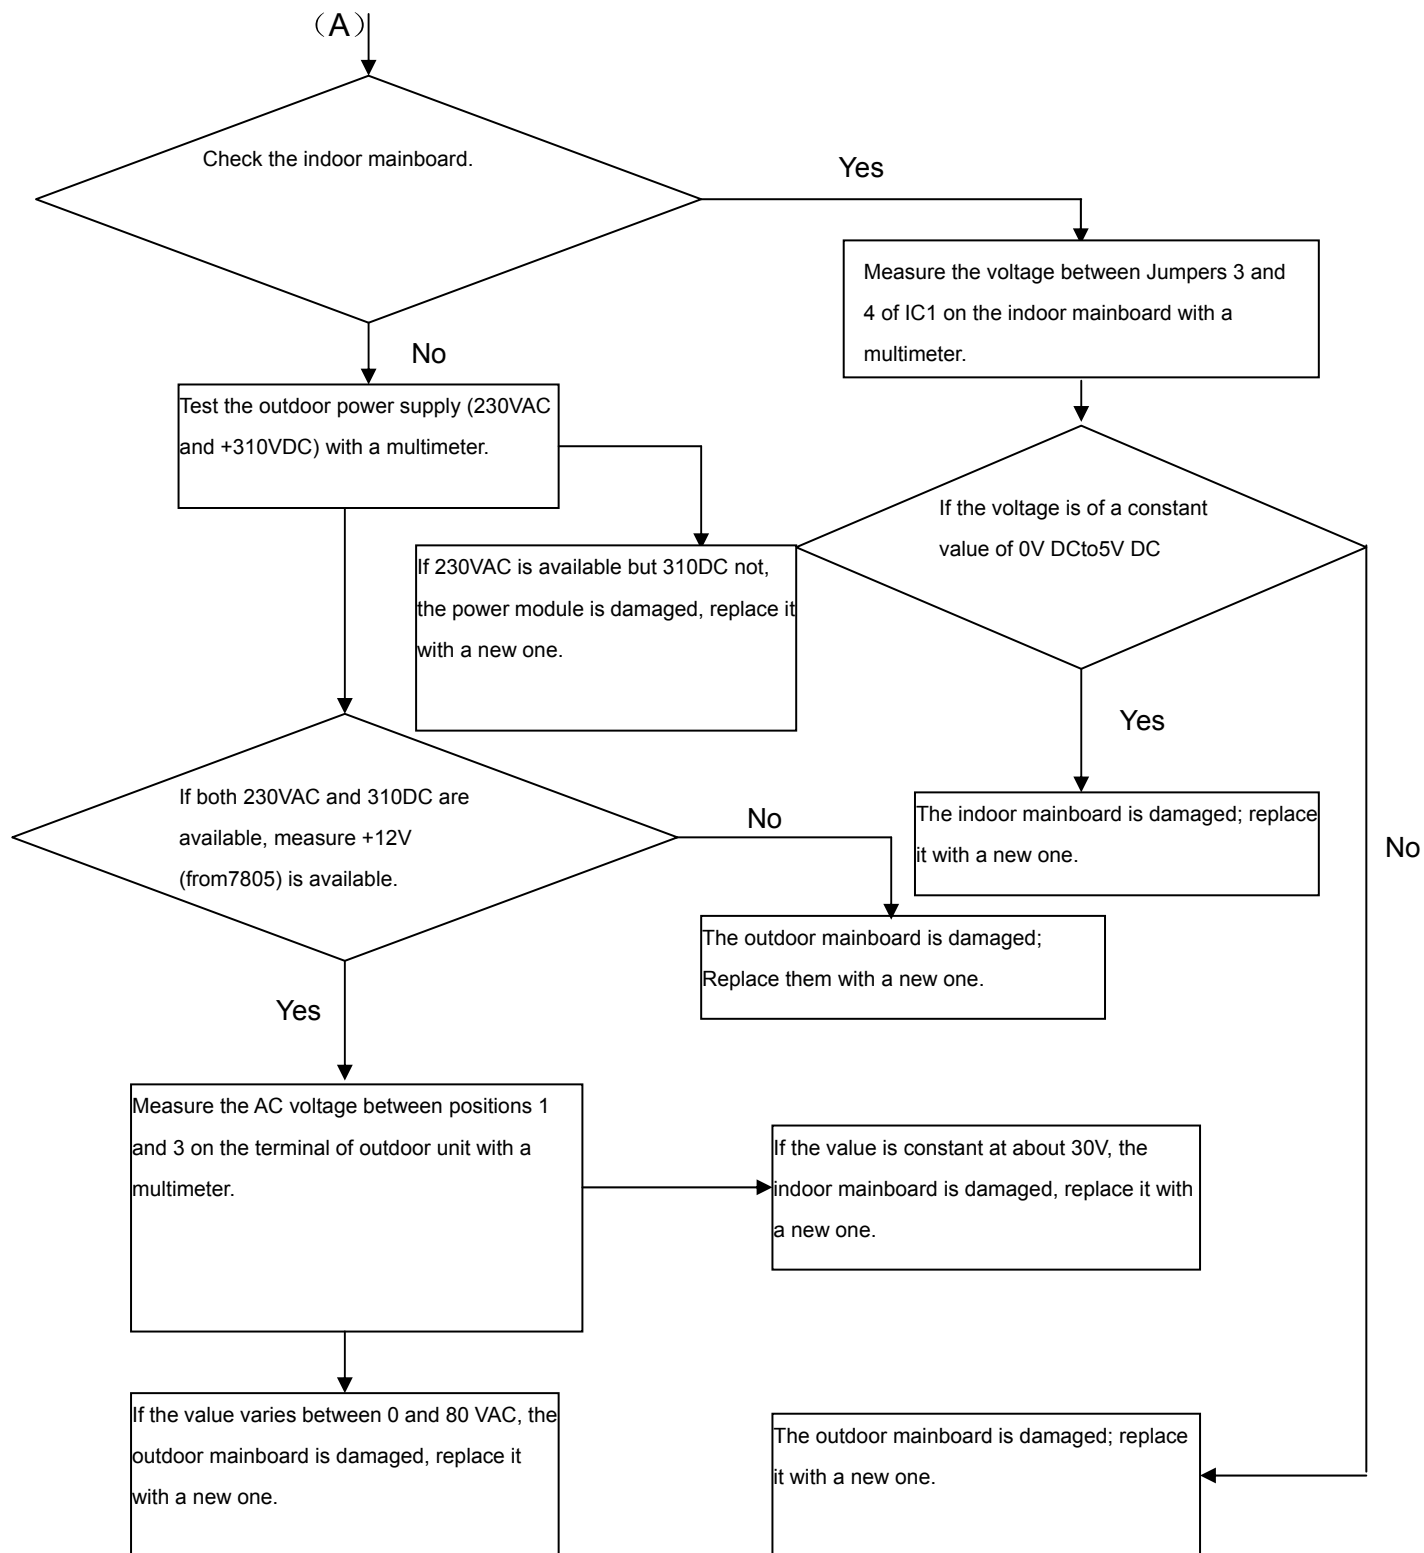

**Spare parts:
Sensors**

10.3.2 The communication fault between indoor and outdoor

| | |
|----------------------------------|--|
| Indoor display | E7 |
| Outdoor display | LED1 flash 15 times |
| Method of malfunction detection | Communication is detected by checking the indoor PCB and the outdoor PCB |
| Malfunction detection conditions | <ul style="list-style-type: none"> ■ The outdoor PCB broken leads to communication fault ■ The indoor PCB broken leads to communication fault |
| Supposed causes | <ul style="list-style-type: none"> ■ Communication wiring disconnected ■ The indoor PCB is broken ■ The outdoor PCB is broken ■ The Module PCB is broken |
| Troubleshooting | <p>* Caution Be sure to turn off power switch before connect or disconnect connector, or else parts damage may be occurred.</p> |

10.3.3 EEPROM abnormal

Indoor Display E4: indoor EEPROM error
 Outdoor display F12: Outdoor EEPROM error; Outdoor LED1 flash 1 times

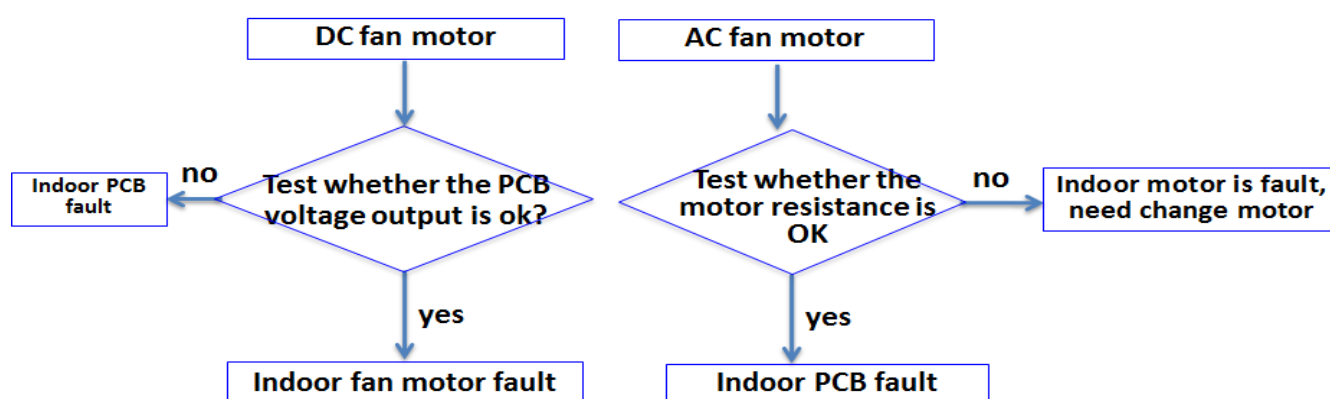

Spare parts:
 Indoor PCB
 Outdoor PCB

Replace the indoor or outdoor PCB

10.3.4 Indoor AC fan motor malfunction

Indoor display E14
 This is caused by indoor motor or indoor PCB fault

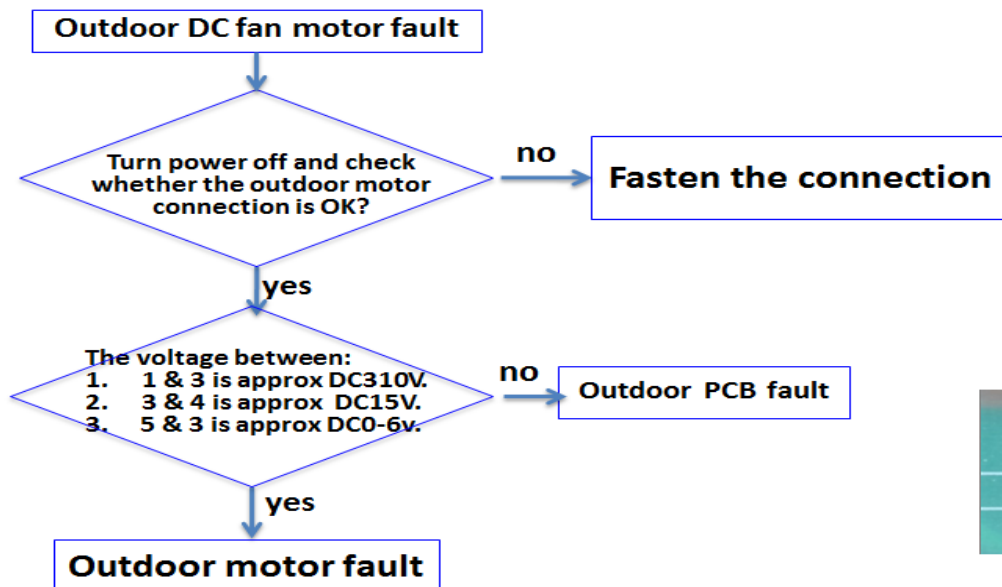

Spare parts:
 Indoor PCB
 Indoor motor

10.3.5 Outdoor DC fan motor fault

Outdoor display F8 LED1 flash 9 times

Spare parts:
outdoor PCB
outdoor
motor

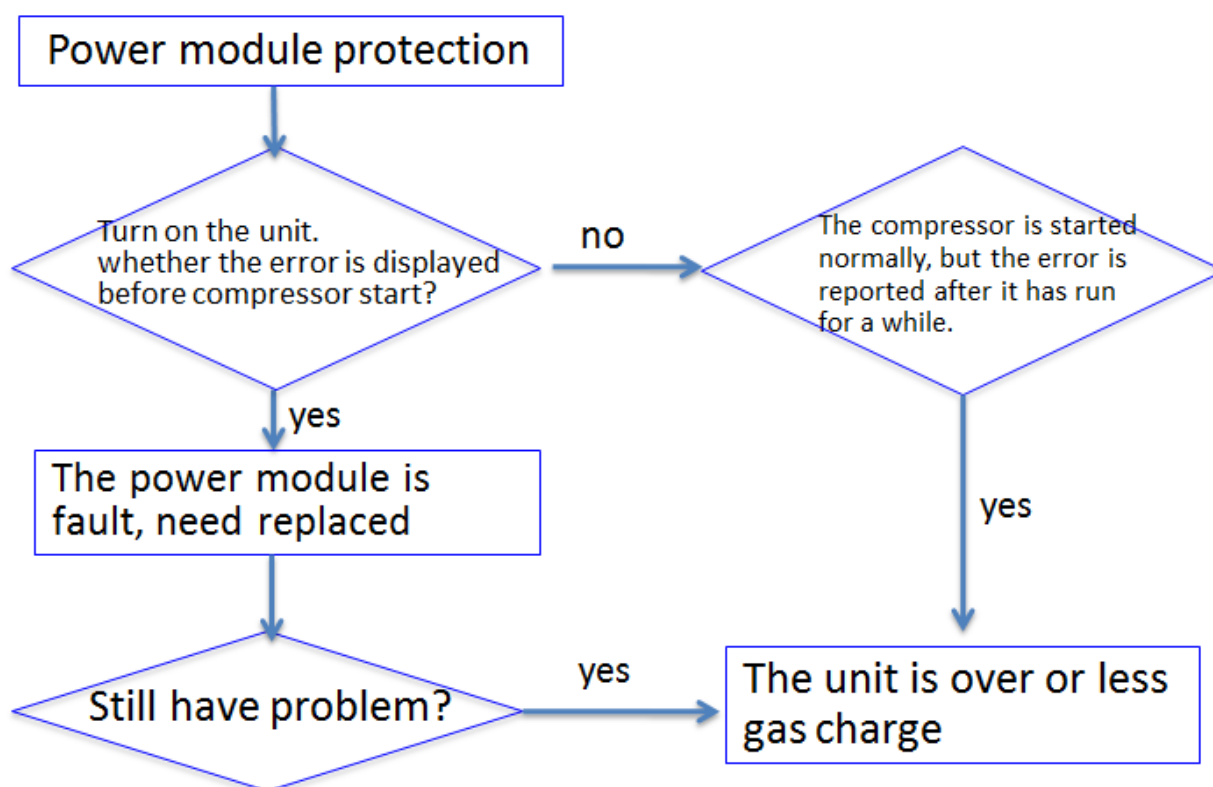

10.3.6 IPM protection

| | |
|-----------------|---|
| Outdoor display | F1 LED1 flash 2 times; F22 LED1 flash 3 times |
|-----------------|---|

Under this error, please ensure the refrigerating system pressure is normal, and no block, then replace power module

Spare parts:
Power
module
Refrigerant

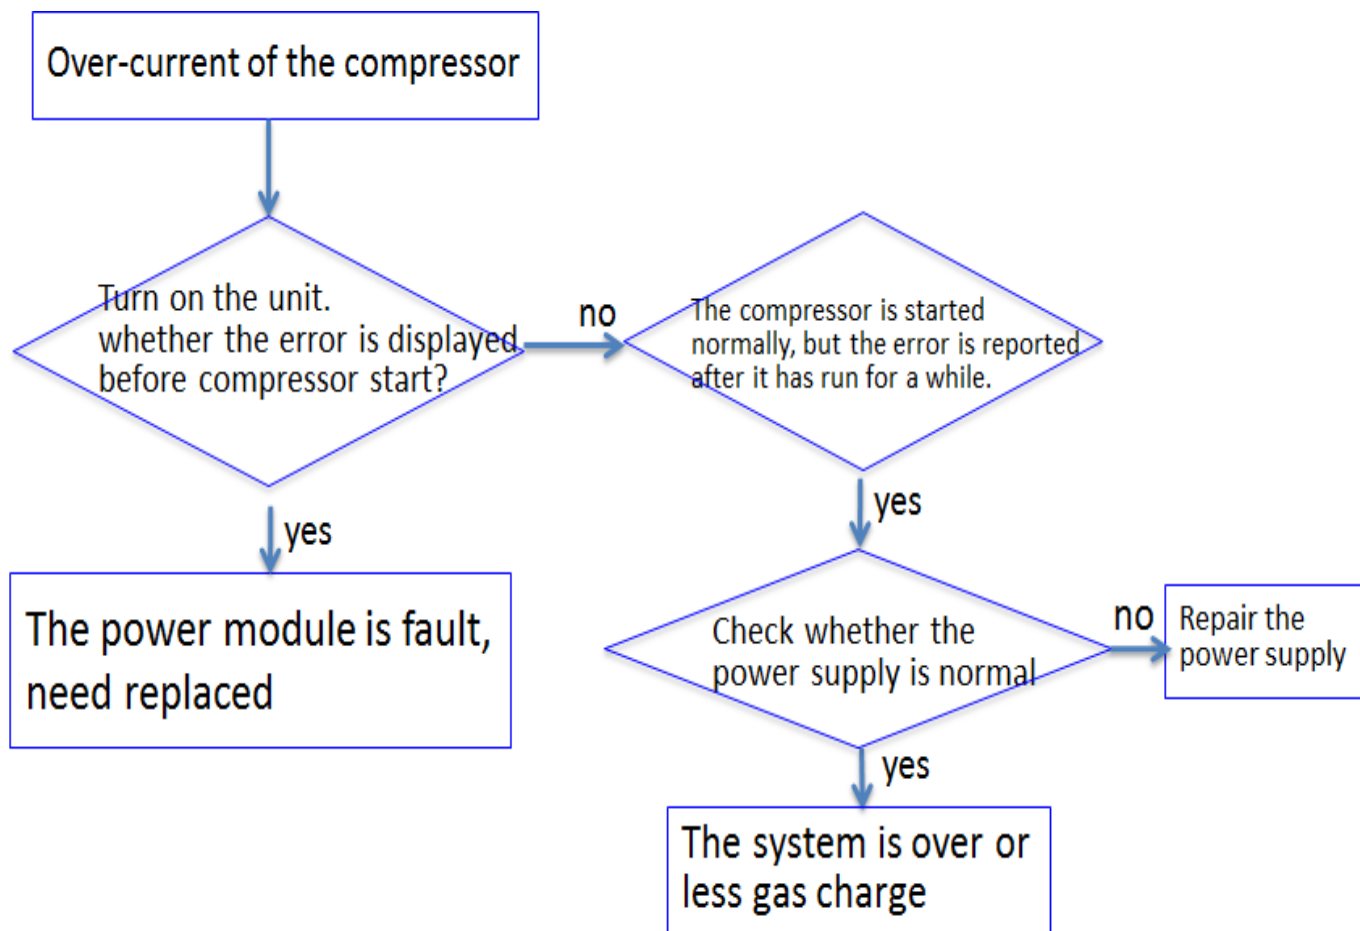

10.3.7 Over-current of the compressor

Outdoor Display

F2, F23 LED1 flash 24 or 25 times

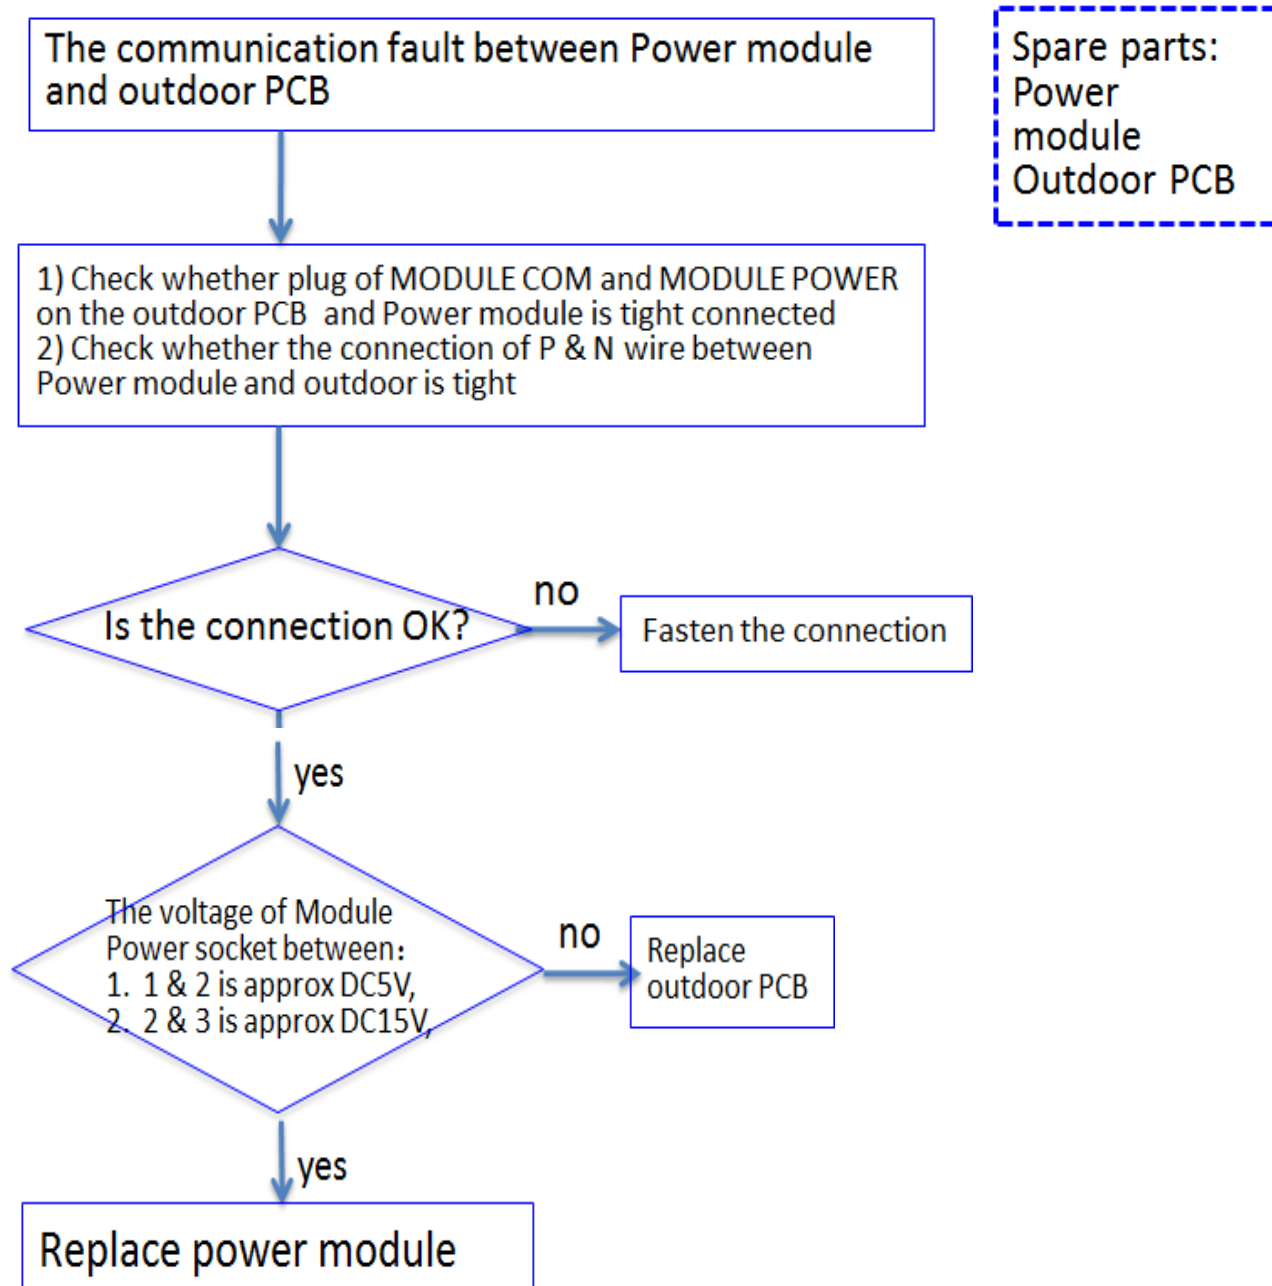

Spare parts:
Power
module
Refrigerant

10.3.8 The communication fault between IPM and outdoor

PCB

Outdoor display: F3 LED1 flash 4 times

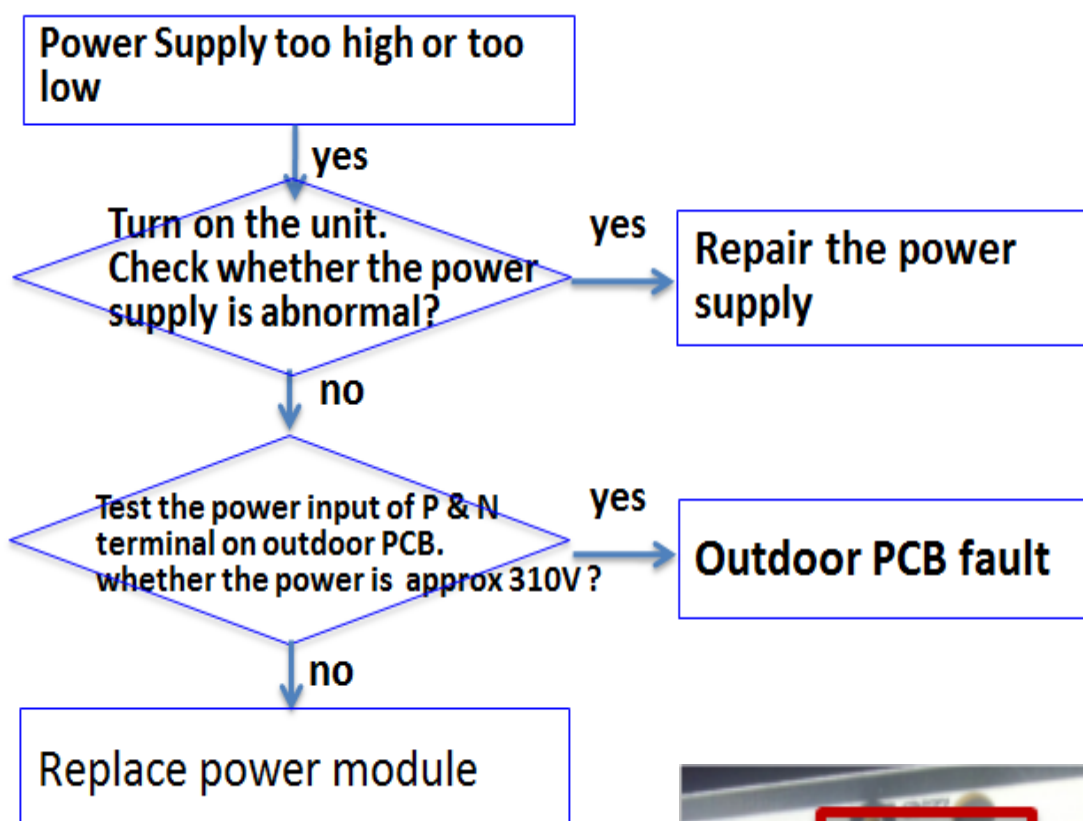

10.3.9 Power Supply Over or under voltage

fault

Outdoor display: F19 LED1 flash 6 times

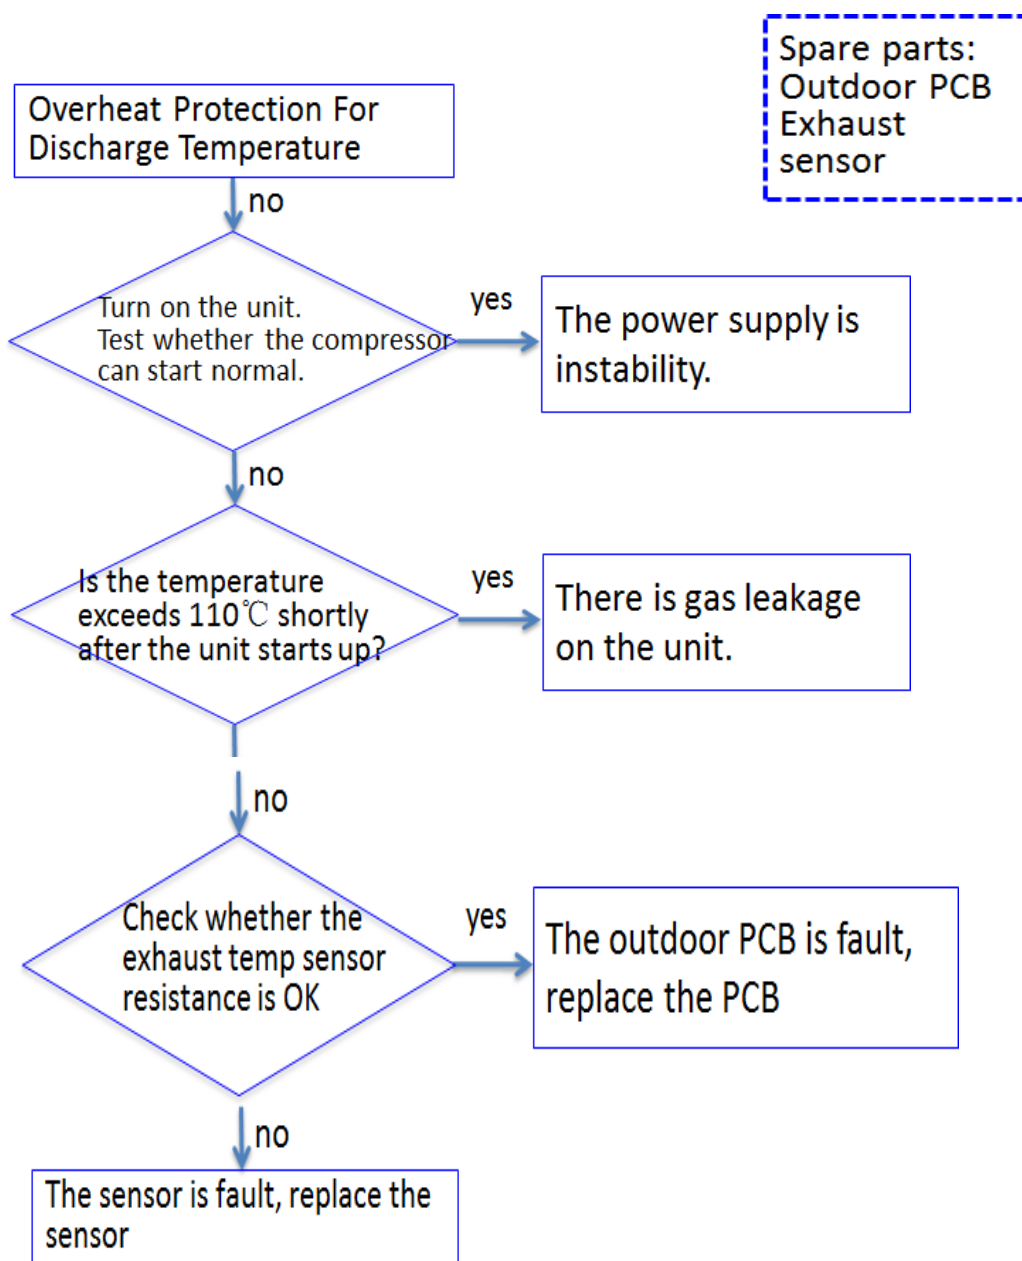

Spare parts:
Power
module

10.3.10 Overheat Protection For Discharge

Temperature

Outdoor display: F4 LED1 flash 8 times

10.3.11 Compressor loss of synchronism detection

Outdoor Display F11 LED1 flash 18 times

The fault phenomenon is the compressor rotor demagnetization and couldn't reach the request frequency.

It is caused by the high exhaust temp or high running current.
In this fault we suggest change the compressor.

Spare parts:
Compressor

10.3.12 Compressor position detection circuit fault

Outdoor Display F28 LED1 flash 19 times

This is caused by the compressor position detection circuit fault, this circuit is located on the power module.

This fault should change the power module.

Spare parts:
Power module

11 Performance and curves diagrams

11.1 Cooling capacity temperature curves

| performance curves | | | | | | | | | | |
|---------------------------------|------|------|------|------|------|------|------|------|------|------|
| cooling value-temperature table | | | | | | | | | | |
| indoor temp. | | | | | | | | | | |
| DB/WB | -15℃ | -10℃ | 0℃ | 10℃ | 20℃ | 25℃ | 30℃ | 35℃ | 40℃ | 46℃ |
| 18/12℃ | 5244 | 5258 | 5281 | 5139 | 4877 | 5941 | 6463 | 6249 | 6190 | 5772 |
| 21/15℃ | 5506 | 5534 | 5451 | 5287 | 5064 | 6278 | 6881 | 6571 | 6419 | 6076 |
| 24/16℃ | 6217 | 6265 | 6078 | 6045 | 5735 | 7029 | 7757 | 7354 | 7214 | 6750 |
| 27/19℃ | 6440 | 6580 | 6440 | 6300 | 5950 | 7350 | 8050 | 7840 | 7560 | 7070 |
| 30/22℃ | 6744 | 6961 | 6732 | 6701 | 6291 | 7681 | 8639 | 8299 | 7961 | 7606 |
| 32/23℃ | 7034 | 7305 | 7101 | 6954 | 6502 | 8135 | 8761 | 8585 | 8393 | 7893 |

11.2 Power consumption temperature curves

| performance curves | | | | | | | | | | |

1.Removal of Outdoor panel

Procedure

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work

| Step | | Procedure | Points |
|---------------------|---|---|--------|
| 1.Remove the panels | | | |
| 1 | Loosen the screws and lift the top panel and remove the handle. |  | |

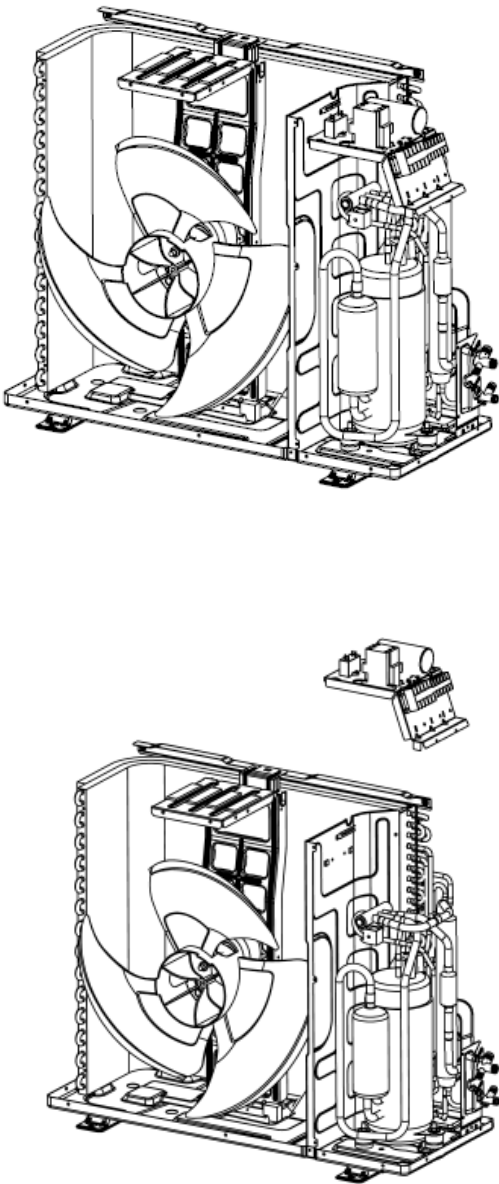

| Step | | Procedure | Points |
|------|--|---|--------|
| 2 | Loosen the screws of the panel, pull and remove the front panel. |  | |

2.Removal of Electrical Box

Procedure

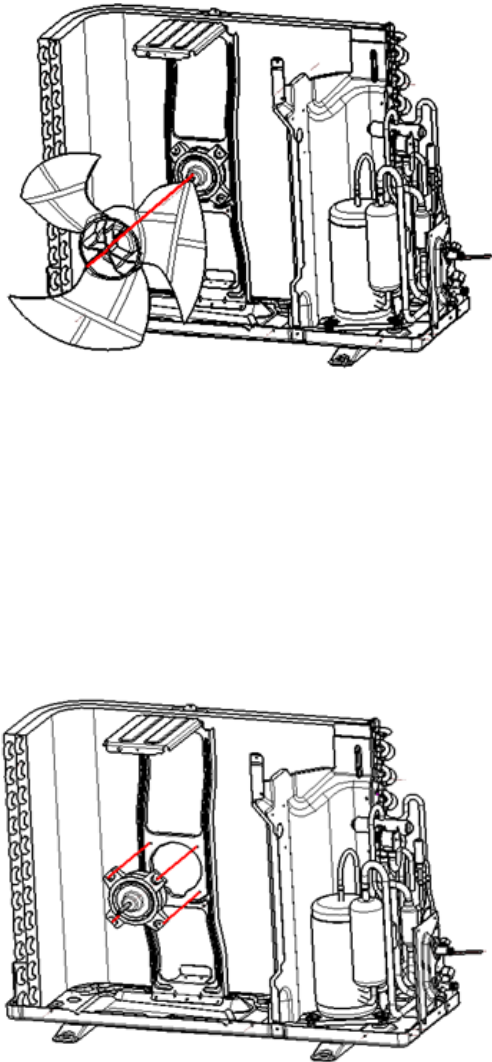

Warning Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work

| Step | | Procedure | Points |
|------|---|---|--------|
| 1 | Remove the fixing screws, Than lift the electrical box. |  | |

3. Removal of Fan and Fan Motor

Procedure

 **Warning** Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

| Step | Procedure | Points |
|------|---|--------|
| 1 | <div><p>Loosen the fixing screws. Remove the fan and motor.</p></div> | |

4. Removal of Fan Motor Bracket and Partition

Procedure

 **Warning** Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

| Step | Procedure | Points |
|------|---|--------|
| 1 | <div><div><p>Loosen the fixing screws and lift the fan motor bracket. Remove the partition</p></div><div></div></div> | |

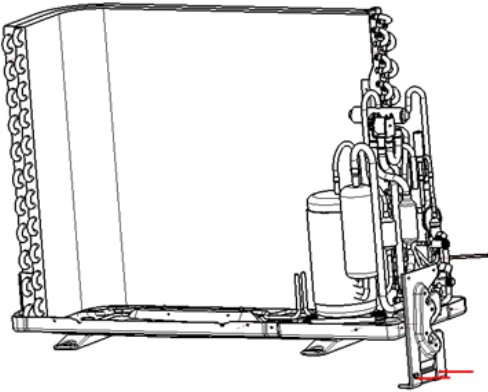

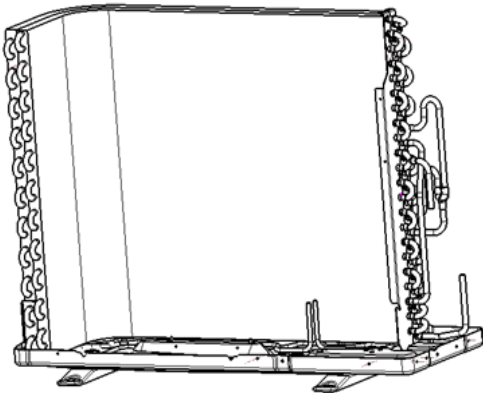

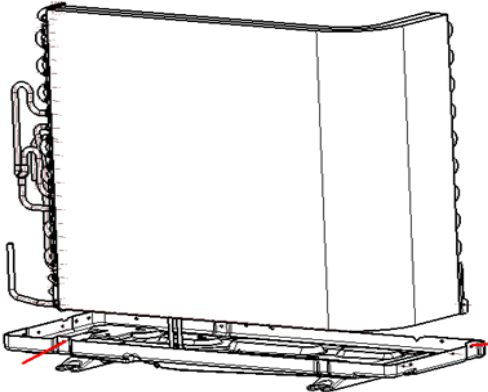

5. Removal of Compressor and Heat Exchanger

Procedure

Warning

Be sure to wait 10 minutes or more after turning off all power supplies before disassembling work.

| Step | Procedure | Points |
|------|--|--------|
| 1 | <div>Remove the valve plate.</div>  | |
| 2 | <div>Remove the valves and the compressor.</div>  | |
| 3 | <div>Loosen the screws and remove the heat exchanger.</div>  | |

Sincere Forever
